

Strava - How to make my swims public

If you are adding swims to your Strava profile and they aren't appearing on your Swim22 fundraising page it might be because your Strava profile is private.

Here are some easy steps to make your profile public. The below instructions are from the Strava app. We would highly recommend downloading this as it is easier to use than Strava's website.

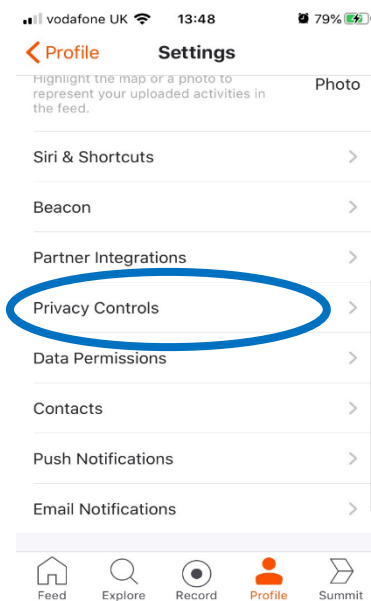

Step 1

When you are on your profile click the setting icon which is in this blue circle.

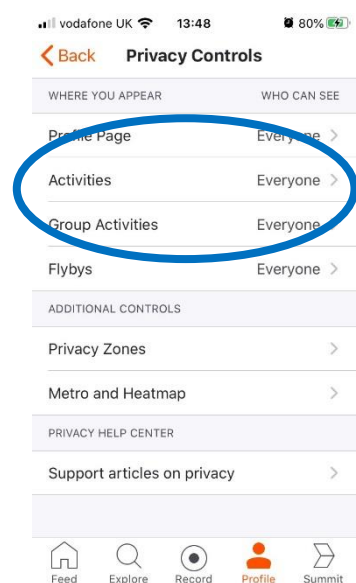

Step 2

When you are on this page you need to scroll down to Privacy Controls.

Step 3

Click on 'profile page' and 'Activities' and choose 'Everyone' from the options. Next time you go for a swim, it should appear on your fundraising page.

If your swims are still not appearing on your Swim22 fundraising page, please email us at Swim22@diabetes.org.uk
